Basic Neurochemistry, Eighth Edition, is the updated version of the outstanding and comprehensive classic text on neurochemistry. For more than forty years, this text has been the worldwide standard for information on the biochemistry of the nervous system, serving as a resource for postgraduate trainees and teachers in neurology, psychiatry, and basic neuroscience, as well as for medical, graduate, and postgraduate students and instructors in the neurosciences.

Basic Neurochemistry: Molecular, Cellular and Medical Aspects, a comprehensive text on neurochemistry, is now updated and revised in its Seventh Edition. This well-established text has been recognized worldwide as a resource for postgraduate trainees and teachers in neurology, psychiatry, and basic neuroscience, as well as for graduate and postgraduate students and instructors in the neurosciences.

Basic Neurochemistry: Molecular, Cellular and Medical ...

This chapter discusses molecular machinery that directs protein phosphorylation and the crucial role of protein phosphorylation in the regulation of cellular and neuronal functions. Protein phosphorylation is the most abundant form of cellular regulation organizing essentially all cellular functions, including metabolism, proliferation, differentiation, motility, and survival.

Basic Neurochemistry had its origin in the Conference on Neurochemistry Curriculum initiated and organized by R. Wayne Albers, Robert Katzman and George J. Siegel under the sponsorship of the National Institute for Neurological Diseases and Stroke, June 19 and 20, 1969, Bronx, New York. At this conference, a group of 30 neuroscientists constructed a syllabus outline delineating the scope of a neurochemistry curriculum appropriate for medical, graduate and postgraduate neuroscience students.
