Direct and Inverse Proportion - Definitions, Formulas ...
It is an Inverse Proportion: As the number of people goes up, the painting time goes down. As the number of people goes down, the painting time goes up. We can use: $t = k/n$. Where: t = number of hours; k = constant of proportionality; n = number of people "4 people can paint a fence in 3 hours" means that $t = 3$ when $n = 4$

Directly Proportional and Inversely Proportional
 k is a positive number, if x and y are in direct proportion or vary directly. In case of direct proportion, if y_1, y_2 are the values of y corresponding to the values x_1, x_2 of x respectively, then $12 \ 12 \ xx \ yy$. • Two quantities x and y are said to be in inverse proportion if an increase in x causes a proportional decrease in y and vice-versa, in

Unit-10 Direct and inverse proportion(final)
So it is a case of direct proportion (v) Wages (y) and number of hours (x) of work. If the workers work for more hours, they will be paid more wages, therefore, wages increases if the number of working hours increase. So it is a case of direct proportion (v) Speed (x) and time (y) distance covered remaining the same.
