The ideal gardening journal for gardeners that love country living, farm life, organic gardening, herbalism, and rural landscapes. This beautiful garden diary was made specifically to assist a gardener in optimizing their harvest. Track water requirements, sun needs, seed costs, and important planting dates. Space is provided to document the medicinal and culinary uses for each plant. This unique gardening journal makes a fantastic gift for gardeners.

This publication offers a comprehensive look at the management of oaks in urban areas. As development moves into oak woodland areas, more and more oaks are becoming "urban" oaks. Oaks are highly valued in urban areas for their aesthetic, environmental, economic and cultural benefits. However, significant impacts to the health and structural stability of oaks have resulted from urban encroachment. Changes in environment, incompatible cultural practices, and pest problems can all lead to the early demise of our stately oaks. Using this book you'll learn how to effectively manage and protect oaks in urban areas - existing oaks as well as the planting of new oaks. Three key areas are addressed: selection, care, and preservation. You'll learn how cultural practices, pest management, risk management, preservation during development, and genetic diversity can all play a role in preserving urban oaks. Arborists, urban foresters, landscape architects, planners and designers, golf course superintendents, academics, and Master Gardeners alike will find this to be an invaluable reference guide.

The Nag Hammadi Scriptures, edited by Marvin Meyer, is the most complete, up-to-date, one-volume, English-language edition of the renowned library of Gnostic manuscripts discovered in Egypt in 1945, which rivaled the Dead Sea Scrolls find in significance. It includes the Gospel of Thomas, the Gospel of Mary, and the recently discovered Gospel of Judas, as well as other Gnostic gospels and sacred texts. This volume also includes introductory essays, notes, tables, glossary, index, etc. to help the reader understand the context and contemporary significance of these texts which have shed new light on early Christianity and ancient thought. The compilation of ancient manuscripts that constitute The Nag Hammadi Scriptures is a discovery that challenges everything we thought we knew about the early Christian church, ancient Judaism, and Greco-Roman religions.

This volume presents contributions from thirty colleagues in honour of Jaromir Malek, for his inspirational role, both in Egyptology more widely, and in the direction of the Topographical Bibliography section of the Griffith Institute, at the Ashmolean Museum, Oxford. The papers reflect the encyclopaedic variety of his interests and research. Several focus on the primary evidence for the past, from Old Kingdom to Late Period sculpture, and from the pyramids to the cat in ancient Egypt. Among the works preserved in museum collections or unearthed in recent excavation, some items are published for the first time, while other papers bring out the wider significance of specific monuments or monument-types. The remaining authors consider an international spectrum of written and pictorial archives, material which Jaromir Malek, more than any of us, has made accessible and taught us to value as primary evidence in a particular form.

The genetics of Alzheimer disease has been a point of intense concern and immense informational confusion for families in which a loved one is diagnosed with dementia. In recent years, however, scientists have begun to uncover the genetic bases for some forms of Alzheimer disease. Once a chromosomal defect is identified, it becomes possible to devise a test for its presence. The far-reaching implications of such tests are the focus of the present volume. In Genetic Testing for Alzheimer Disease, Stephen G. Post and Peter J. Whitehouse bring together experts from the fields of ethics, genetics, policy, neurology, philosophy, and anthropology to examine the ethical and social aspects of genetic testing for Alzheimer disease. The authors begin by focusing on current genetic findings and their clinical applicability. They then address ethical issues in genetic testing and genetic counseling for Alzheimer disease. They examine social issues such as confidentiality, discrimination, and fairness in health care. Finally, they discuss ways to educate professionals and laypeople regarding these issues. Contributors: Robert H. Binstock, Ph.D.;Thomas D. Bird, M.D. ? Robert Mullan Cook-Deegan, M.D. ? Leonard Fleck, Ph.D. ? Atwood D. Gaines, Ph.D, M.P.H. ? Eric T. Juengst, Ph.D. ?
