PL/SQL User's Guide and Reference 10g Release 2 (10.2)

In this chapter, we will discuss the cursors in PL/SQL. Oracle creates a memory area, known as the context area, for processing an SQL statement, which contains all the information needed for processing the statement; for example, the number of rows processed, etc. A cursor is a pointer to this context area. PL/SQL controls the context area through a cursor.

Oracle Database Online Documentation 11g Release 2 (11.2)

PL/SQL offers a set of procedural commands (IF statements, loops, assignments), organized within blocks (explained below), that complement and extend the reach of SQL. PL/SQL is Oracle ' s extension of SQL designed for developers working with the Oracle Database. It is certainly possible to build applications on top of SQL and Oracle Database without using PL/SQL. Using PL/SQL to perform database-specific operations, most notably SQL statement execution, offers several advantages, though ...
