A concise yet broadly based text geared for students with varying degrees of knowledge of the subject. Introducing biochemistry using the theme of intermediary metabolism, the text is divided into three sections: Biological Compounds, such as proteins, nucleic acids, carbohydrates, lipids, and amino acids; Metabolism of Energy-Yielding Compounds, including comprehensive chapters on photosynthesis, the nitrogen and sulfur cycles, ammonia assimilation, and sulfate assimilation; and Metabolism of Informational Molecules, with chapters on molecular biology and biotechnology. This edition features more information on plant biochemistry, a new chapter on genetic engineering, gene manipulation, and viruses and gene rearrangements. Extensive updating and revision throughout.

It has long been assumed that product innovations are usually developed by product manufacturers, but this book shows that innovation occurs in different places in different industries.

Biochemistry: The Chemical Reactions of Living Cells is a well-integrated, up-to-date reference for basic biochemistry, associated chemistry, and underlying biological phenomena. Biochemistry is a comprehensive account of the chemical basis of life, describing the amazingly complex structures of the compounds that make up cells, the forces that hold them together, and the chemical reactions that allow for recognition, signaling, and movement. This book contains information on the human body, its genome, and the action of muscles, eyes, and the brain. \* Thousands of literature references provide introduction to current research as well as historical background \* Contains twice the number of chapters of the first edition \* Each chapter contains boxes of information on topics of general interest
