Section 1 Work And Power Answer Key

Eventually, you will no question discover a extra experience and completion by spending more cash. still when? accomplish you tolerate that you require to get those all needs next having significantly cash? Why don't you attempt to get something basic in the beginning? That's something that will guide you to comprehend even more not far off from the globe, experience, some places, like history, amusement, and a lot more?

It is your certainly own mature to play reviewing habit. in the

science chapter 4 section 1 work and power. STUDY. PLAY.
work. the transfer of energy to an object by using a force that causes the object to move in the direction of the force. work. depends on distance as well as force. joule. the unit used to express energy; equivalent to the amount of work done by a force of 1N acting through a distance of 1m in the direction of the force.

~~science chapter 4 section 1 work and power Flashcards ...~~

Section 1 Work and Energy What Is Work? ? How is work calculated? ? Work is calculated by multiplying the force by the distance over which the force is applied. – work = force x distance, or $W = Fd$ – The force must be applied in the direction of the object's motion.

~~work and power.pptx – Work and Energy Section 1 Section 1 ...~~

- work: the transfer of energy to an object by the application of a force that causes the object to move in the direction of the force
 - Work is zero when an object is not moving.
 - Work is measured in joules (J): $1 \text{ N} \cdot \text{m} = 1 \text{ J} = 1 \text{ kg} \cdot \text{m}^2/\text{s}^2$
- > What is the relationship between work and power? > Power

change in the potential energy of the body and the work done against all resistive forces is equal to the change in the total energy. Power. Power is the rate at which work is done (measured in watts (W)), in other words the work done per second. It turns out that: $\text{Power} = \text{Force} \times \text{Velocity}$

Solution: Find the value for work by substituting the given values for force and distance in the work equation: $W = Fd = 20 \text{ N} \cdot 2.0 \text{ m} = 40 \text{ N}\cdot\text{m} = 40 \text{ J}$ Substitute the values for work and time in the power equation to find the value for power: $P = \frac{W}{t} = \frac{40 \text{ J}}{1 \text{ s}} = 40 \text{ J/s} = 40 \text{ W}$ Work Time 40 J > s 1 s 40 W 1 s Work Time.

14.1 – WORK & POWER What Is Work? (pages 412–413) 1. In science, work is done when a(n) FORCE acts on an object in the direction the object moves. 2. Why isn't work being done on a barbell when a weight lifter is holding the barbell over his head? Because the force is upwards and there's no distance in the direction of the force.

SECTION 1 Name Class Date Work, Power, and Machines continued How Are Work and Power Related? Like work, power has a very specific meaning in science. Power is the rate at which work is done or energy is used. In other words, power is how much work is done in a given amount of time. The equation for power is: power _____ work time $P = \frac{W}{t}$

~~CHAPTER 13 Work and Energy SECTION 1 Work, Power, and Machines~~

both do the same amount of work. However, the amount of power they use depends on how long it took to do the work. Power is how quickly work is done. The weightlifter who lifted
